workplace search that works

AI-powered workplace search. Across all your company's apps.

Increasing workplace complexity and SaaS sprawl have resulted in workers losing 20% of each day searching for information. New technologies like generative AI offer to solve the problem, but general purpose AI offerings don't provide the accuracy, security, and data governance critical for use in enterprise environments.

Glean is the workplace search and generative AI assistant that uses its deep understanding of all your company's content, employees, and activity to help workers find exactly what they need – across all applications, in every situation. With enterprise-grade permissions, data governance, and reference ability, Glean is the generative AI solution you can trust.

Enterprise search & knowledge graph.

- Deeply relevant and personalised search results.
- Knowledge graph that understands all your content, people, and activity.
- Unified, org-wide solution that works across all applications, sources and files

Easy implementation. Secure & trusted results.

- Single tenant architecture and permissioned indexing ensure airtight security.
- All results from Glean are referenceable and provide citations.
- Setup is quick. No need to build your own data retrieval infrastructure. Works with your LLMs of choice.

Generative AI - your assistant and copilot.

- Experience Glean Chat - the world's first enterprise-ready, generative AI solution.
- Generate actionable insights, new content, and precise answers for everyday work.
- Retrieval Augmented Generation ensures responses are grounded in Glean's best-in-class search results.
